EDUCATION

University of British Columbia

Bachelor of Science in Cognitive Systems - Computational Intelligence

Vancouver, BC

Sept 2025 – Present

Bellevue College

Dual Enrollment with Redmond High School

Bellevue, Washington

Sept. 2024 – June 2025

EXPERIENCE

LLM Skill Mutation Research

Anant Sahai

May 2026 – Present

UC Berkeley

- Developed an agent orchestration workflow to optimize skills on LLM benchmarks.
- Created a deterministic skill evaluation method involving accuracy, token usage, and step count as metrics. These metrics are then used as a fitness signal for the mutator to decide which to keep.
- Optimized skills on various benchmarks covering: editing code, SQL, data science and logic puzzles.

PROJECTS

VS Live - Microsoft AI Hackathon 2026 | C#, .NET

July 2026

- Won \$1250, 2nd place for Best AI Agent or Workflow Automation. Solo competitor.
- Created SERT - Social Engineering Red Teaming, an AI agent orchestration workflow that creates phishing-style social-engineering attacks on company employees and AI agents to expose vulnerabilities before they are exploited.
- Attacks are summarized by the orchestrator agent, and a comprehensive report including statistics on most successful phishing methods, most vulnerable employees, and recommended improvements is created.
- Enables companies to find weak links in their employees and also stress test AI agents with dangerous capabilities.

UBC Academic Success Tools | Python, Vite, React, TypeScript

May 2026

- Created an AI chatbot to help with finding courses, untangling prerequisites, and planning degrees.
- Made tools for looking up courses, visualizing course prerequisite trees, and finding UBC events.
- Created a drag-and-drop course planner that enables the user to build multi-year schedules that follows course prerequisite rules and satisfies program requirements.

Balancing Biped | Unity, C#

May 2026

- Developed a technical demo for a realistic physics-based balancing bipedal creatures
- Creature can stand on moving ground, balance with weights stacked on top of it, and withstand projectiles.
- Authored an LLM Skill to allow the automated creation of highly tuned balancing creatures of different physiques

Computer Vision Game | Unity, C#, MediaPipe

January 2026

- Created a first person shooter game controlled entirely through webcam-based hand tracking.
- Implemented hand positional tracking with MediaPipe and custom hand sign detection.

Blind Arcade | Unity, C#

July 2024

- Developed an accessibility-first mobile game for the blind and visually impaired.
- Created using motion tracking via the gyroscope, spatial audio, and haptic feedback.
- Published to the Google Play Store earning nearly 3k downloads and over 10k views on YouTube

OTHER

Honors: Unity Certified Programmer, Washington State Seal of Biliteracy (Mandarin and Spanish)

Languages: C#, Python, R

Developer Tools: Unity, Git, Visual Studio, Jupyter Notebook, Claude Code, Codex

Leadership: Led 6 game development teams across various projects.
